

PROFILE TECHNOLOGY FOR VEHICLE FIT OUT

Vehicle Fit Out

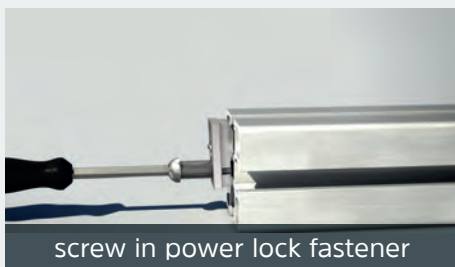

A PROFILE SYSTEM FOR UNLIMITED FREEDOM

Freely design vehicle fit out

With our modular system based on the **MiniTec aluminum profile system**, we provide the optimum basis for vehicle extensions. Our 30 and 45 profile series offer a wide range of aluminum profiles in various sizes and geometries for individual requirements. All components of our modular system are compatible with each other. With appropriate accessories or fastening elements, your own designs are quickly planned and implemented - without any prior machining of the profiles. Due to the intelligent connection technology, they can be changed again at any time.

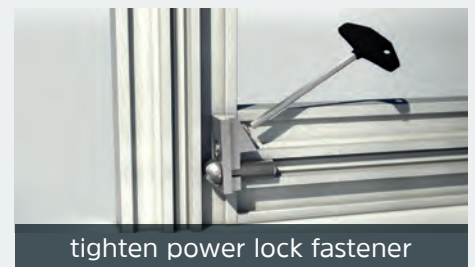

QUICK AND EASY ASSEMBLY WITH THE **MINITEC POWER LOCK FASTENER**

screw in power lock fastener

slide in profile

tighten power lock fastener

For individual requirements

Profile series 45 is our standard system, which is particularly suitable for stable constructions with high loads: Wall and ceiling constructions or heavy-duty equipment racks. Our **profile series 30** has been specially developed for vehicle fit out: it is as compatible with the modular system, but lighter and smaller in order to save weight and space, especially in interior fittings. Furniture can thus be optimally realized. In addition to numerous accessories and fastening elements, panel elements can also be inserted in the open grooves of our aluminum profiles in no time at all, thus creating a very individual, cozy atmosphere.

With our free of charge construction tool **iCAD Assembler**, constructions and parts lists can be created in advance so that nothing stands in the way of implementation.
